Write a method below that returns true if a String contains only digits ('0' to '9')

Use the isDigit() method in the Character class. The documentation is here:

<https://docs.oracle.com/en/java/javase/13/docs/api/java.base/java/lang/Character.html>

```
public static boolean isAllDigits(String source)
    for(int i = 0; i < source.length() ; i++)
    {
        char var = source.charAt(i);
        if (!Character.isDigit(var))
        {
            return false;
        }
    }
```
